

Optomap Retinal Exam Consent

Annual eye exams are critical for maintaining not only clear vision but also preserving the long-term health of your eyes. One of the most important parts of this evaluation is the retinal exam, which can detect early signs of eye disease and systemic health conditions such as high blood pressure, diabetes, and cancer.

At Woodbine Eye Care, we are proud to offer the **Optomap Retinal Exam** - an advanced imaging technology that provides a wide-field, high-resolution image of your retina, often without the need for dilation. Vision insurance does not cover this vital test, but it plays a critical role in protecting your long-term eye health.

Benefits of the Optomap Retinal Exam:

- Quick, non-invasive, and comfortable
- No dilation (No blurry vision, light sensitivity, or stinging drops)
- Captures a permanent digital image of the retina for future comparison
- Provides early detection of ocular and other health conditions in the body

- ☐ I elect to have the recommended Optomap of my retina for **\$39**
- ☐ I decline the Optomap and understand this limits the doctor's ability to fully assess my eye health
